Santa’s Sleigh Pick

craftidlydesigns.etsy.com

1. Locate the ***Santas Sleigh Pieces for Pick.svg*** file in the SVG folder. Upload to your cutting machine. Duplicate the art.

   Note: This file is set up to make a pick that is about 7-inch wide. Adjust the size to work with your globe/project.

2. Cut the pieces out of black card stock. I used the Light Cardstock - 65 lbs. setting with Default Pressure in Cricut Design Space. Choose the settings that work with your machine.

3. Bend a wire into an arched shape with two straight pieces at each end. I am using 20-gauge stainless steel wire. Use tacky glue to glue the pieces to the underside. Let the glue set up before going to step 4.

   Tip: Work on waxed paper so your pick can be easily moved later.

4. Add more glue and place the second set of pieces over top. Let dry completely.

5. Optional: Paint the wire black. For sparkle, paint lightly with Mod Podge and sprinkle white glitter over top. Tape the wire ends to the back of your globe.
